Do you need to work and communicate with technical teams... but it seems like you speak a different language?

Do you need information systems that support the way you work... based on your actual processes, roles and responsibilities?

Would you like your participation in information technology projects... to result in systems that more reliably meet your needs?

This short course will enable you to:
- Provide strategic guidance to your technical teams
- Effectively communicate your health information system needs
- Use tools to improve processes within your agency for better automation
- Share experiences and learn best practices from peers

Designing and Managing Public Health Information Systems: 8 Steps to Success

A short course in Public Health Informatics

What is the IT Lifecycle and how can it help you?

The Information Technology (IT) Lifecycle covers the eight phases of information system development, providing a framework for conducting key activities in a phased, systematic way.

This instructor-supported course gives you the opportunity to learn about and apply the IT Lifecycle to your current informatics projects.

Understanding the IT Lifecycle will allow you to effectively integrate your input into informatics projects to ensure that information systems meet your programmatic needs.

Student comments from Designing and Managing Public Health Information Systems: 8 Steps to Success

“This course has given me the information I needed to develop a consistent and complete framework for informatics projects.”

“This course will help me to better liaise with IT and to ensure that the system developed fits the varying needs of all of its users.”

“The course has provided me with a concrete set of steps and checklists . . . I am better equipped to undertake an informatics project and feel less overwhelmed now that I have the tools presented in the course.”
